

Compost Treatment Log

PSR Required (if applicable)

FSMA PSR Reference § 112.60

Frequency: As necessary

The Produce Safety Rule (PSR) requires farms covered by the rule which produce treated biological soil amendments of animal origin document that process controls were met (for example, time, temperature, and turnings). Farms using treated soil amendments received from a third party must keep documentation that the amendment achieved required process controls.

Farm Name & Address: *High Hill Produce 1845 S. Ridge Rd. Red Lodge, MT 59068*

Year: *2022*

Compost Method: *Aerated compost* Compost Row Number/Area: *Row 1*

Compost Pile Start Date: *3/15/2022* Compost Pile Finish Date: *8/30/2022*

Section §112.54 (b) of the PSR provides an example of proper compost production that satisfies the microbial standards in section §112.55 (b). Static composting outlined in the rule requires a minimum temperature of 131°F to be maintained for 3 days. Turned composting outlined in the rule requires a minimum temperature of 131°F for 15 days, during which the materials must be turned 5 times (FSMA Produce Safety Rule).

Date Turned	Test Area 1 (Temp. + Time)	Test Area 2 (Temp. + Time)	Test Area 3 (Temp. + Time)	Test Area 4 (Temp. + Time)	Initials
